LAMINEX
and
WOCO
DOORS

FROM VIRGIN FORESTS
OF DOUGLAS FIR

THE WHEELER, OSGOOD COMPANY

TACOMA, WASHINGTON
U. S. A.

ESTABLISHED 1889

The history of the Wheeler, Osgood Company has been one of steady progress and growth. We are the world's largest manufacturer of doors and Douglas Fir plywood.

Our factories are located in Tacoma, Washington, occupying twenty acres adjoining Tacoma Harbor. Doors and plywood shown in this catalogue are from Douglas Fir only. This wonderful wood for door construction comes from the virgin forests of the Puget Sound country.

The Wheeler, Osgood Company doors, under the trade mark name "WOCO" and "LAMINEX," are sold by leading jobbers in every section of the United States and Canada and in all other important countries of the world.

DIRECTIONS FOR ORDERING

Always order by our design numbers.

Always specify grades required.

When ordering solid stiles and rail doors specify WOCO Doors.

When ordering Laminex Doors specify Laminex and whether Flat or Vertical grain stiles and rails are desired.

When ordering any types of doors which are made with either solid raised Panel or flat Laminex Panel always specify which is desired.

Bead and Cove is our standard Sticking.

All measurements shown in this catalogue for stiles, rails, etc., are over-all measurements including sticking.

All Three Ply Laminex Panels used in both WOCO and Laminex Doors are Laminex waterproof cemented.

LAMINEX

"The Trouble Proof Door"

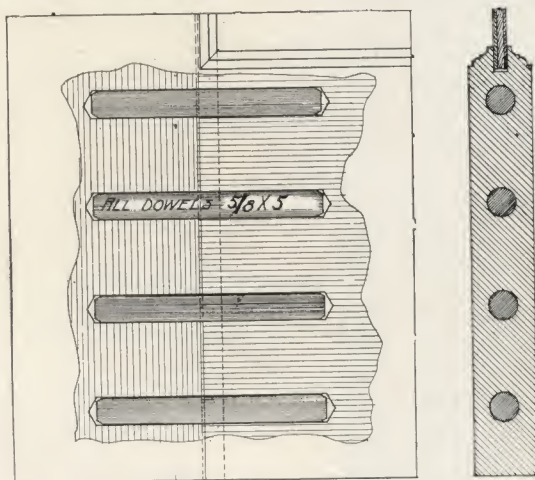

The day has passed when door buying was greatly a matter of guess work, when a door was merely a door and the purchaser took a chance on getting long and satisfactory service from the doors he bought.

Now "*Laminex*" eliminates these troubles. It is truly a Trouble-Proof Door, for it can be depended on not to shrink, swell or warp. Once hung, "*Laminex*" doors are up to stay—perfectly.

"*Laminex*" doors are built by our special process of construction—one embodying the principle of lamination. The grain of the adjoining sections is so "crossed" that it equalizes all expansion and contraction, and holds the whole in check, for wood cannot shrink in length and the "*Laminex*" cement is stronger than the wood. "*Laminex*" doors are furnished in both vertical and flat grain stiles and rails. The following pages will give you an idea of the wide choice of designs.

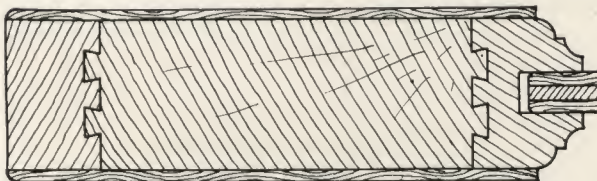

Every "*Laminex*" door is guaranteed. The warrant attached to every "*Laminex*" pledges it to come up to the highest standard of quality, durability and service.

DOWEL CONSTRUCTION IN LAMINEX AND WOCO DOORS

Four wooden dowels are used in the construction of bottom rail joints and two in top rail joints of LAMINEX and WOCO doors. All dowels are $\frac{3}{8}$ inch in diameter and 5 inches long. They give over 50 per cent more strength and 30 per cent greater cement surface than those with a half inch diameter.

LAMINEX STILE AND RAIL CONSTRUCTION

Cross section of LAMINEX stile and rail construction. Core is laminated and locked to edge-strips by wedge, dove-tail joints. LAMINEX stiles and rails are built up on Linderman dove tailing machines.

LAMINEX GUARANTEED DOORS

A typical cross-section through the stile or rail of a Belle Porte door. Note the solidity of construction.

DURABLE DOUGLAS FIR

WOCO DOORS

The world's largest forests are located in the Pacific Northwest. We draw our timber supply from those regions that produce the finest quality of lumber suitable for door manufacture.

The most perfect timber from our own logging operations as well as selected timber from other large operators is cut in our own mills under our personal supervision for the manufacture of WOCO Doors.

WOCO Doors are all made from Durable Douglas Fir.

LOS ANGELES SLAB DOOR

Slab Doors Are Made 5 Ply

A solid lumber core is first constructed, over which is cemented $\frac{1}{8}$ " crossbanding and $\frac{1}{8}$ " face veneers.

Inserted edge strips conceal the crossbanding.

Laminex Waterproof Cement is used in applying crossbanding and face veneers.

A FREE ADVERTISING SERVICE

Most people, being human, prefer to spend their good money on products which are widely known and nationally advertised—the ones with a reputation to live up to. Certainly Laminex doors are in this class.

There is only one reason that we know of why some dealers sell more Laminex doors than others, all else being equal. They advertise. They are not content to “carry” Laminex in stock. Oh, no. There is no money in *carrying* merchandise. These dealers *sell* Laminex. They realize that there’s a whale of a difference between having a good article in stock and in LETTING PEOPLE KNOW that they have it in stock.

So, to help dealers who welcome advertising and selling helps, we offer a set of free newspaper electros and other materials with “directions for using.”

We have various attractive leaflets for use as envelope stuffers. These we will imprint with the dealers firm name. Fiber Laminex job signs and door knob and wall hangers are available. We will gladly give suggestions for circular letters and direct mail advertising, suggestions for exhibits, in fact, a complete advertising service on Laminex doors.

By using this advertising service you can identify yourself with the powerful national advertising and become known throughout your trading area as headquarters for Laminex doors.

Write our advertising department for booklet describing our many sales-helps.

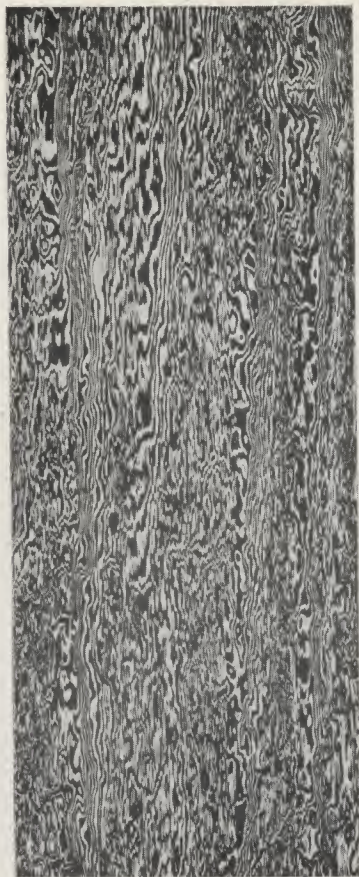

Laminex Plywood

“LAMINEX”
withstands the *famous*
WATER TEST

LAMINEX PANELS

WATERPROOF CEMENTED

A three-ply fir panel taken from stock without selection showing the typical grain of Durable Douglas Fir when cut around the log nearly parallel to the rings of annual growth.

We can furnish plywood in carloads or less than carloads to be included with doors.

“LAMINEX PANELS”

The finest logs the logging camps produce are selected for our veneer plant.

They must be free of pitch pockets, stain, knots and of soft old growth texture.

Our Laminex panels are all cemented with our famous Laminex Cement, which has proven so satisfactory in our Laminex doors.

Long ago we passed the experimental stage in peeling fir veneer. Today, in peeling around the log, we produce a sheet as wide as desired and as long as the largest lathe. Then by a process resulting from great ingenuity and an intimate knowledge of the cell structure of fir, we dry these sheets so that they do not check, warp or split.

The scientifically prepared sheets of veneer are cemented together with the grain of alternate layers running crosswise. The result is a stiff, flat, solidly constructed piece of lumber presenting one continuous face, much stronger than a solid piece of lumber of equal thickness.

Laminex Cement as used throughout in the glueing up of our ply-wood panels, makes them absolutely weatherproof and waterproof. Laminex panels will not swell, shrink or come apart.

These panels are used throughout in all our flat panel doors, regardless of size, both in the higher and lower grades.
